A Heat Transfer Text by Lienhard and Lienhard excels in that it provides terse, easily understandable exposition of nearly all heat transfer phenomena that provides any student with a solid foundation in the material.

Heat and Mass Transfer A Practical Approach, 3rd Edition ...

As for Heat transfer it is difficult to understand the concepts, and questions at the end of the chapter are ambiguous and it is difficult to understand what the question is looking for. The school required this textbook because of its cheapness to help the students, but unfortunately the book isn't a good one and I have basically been using another book.

The content on heat exchangers was also very complete for an undergraduate textbook, with a focus on engineering analysis and design. Also unique was the quality of the examples and problems, which ranged from simple academic exercises to complex and realistic engineering problems.

20 Introduction §1.3 The constant h is the film coefficient or heat transfer coefficient. The bar over h indicates that it is an average over the surface of the body. Without the bar, h_{denotes} the "local" value of the heat transfer coefficient at a point on the surface. The units of h are $W/m^2 \cdot K$.

Another point, a portion of heat transfer (known as convective heat transfer) is hugely dependent on fluid flow and momentum transfer/diffusion, hence have a very good text of fluid mechanics at your desk, which might be F.M.White, Cohen and Kundu, Som, Biswas and Chakroborti, Pantan or any book what you adore.

•A variety of high-intensity heat transfer processes are involved with combustion and chemical reaction in the gasifier unit itself. •The gas goes through various cleanup and pipe-delivery processes to get to our stoves. The heat transfer processes involved in these stages are generally less intense.
