# Read Book Accelerating Clean Energy Technology Research Development And Deployment Progress in Accelerating Clean Energy

The world's energy transformation is accelerating. This is due to a combination of technological progress, developmental priorities and rising environmental concerns. Past experiences suggest that energy transformations were driven primarily by economic opportunity and technological development, not fuel resource scarcity. The ongoing

**Clean-Energy Research Accelerates | [www.caltech.edu](http://www.caltech.edu)**

Balancing climate change mitigation and increased energy needs in developing countries poses a serious dilemma that can only be reconciled with new and improved clean energy technologies. Factors, such as relatively low levels of research, development and deployment (RD&D) funding and significant barriers to advancement, must be overcome to accelerate innovation in the energy sector.

# Read Book Accelerating Clean Energy Technology Research Development And Deployment

countries representing 90 percent of clean energy investment and 75 percent of global carbon emissions are announcing new actions to accelerate the global transition to a clean-energy economy. This means ramping up deployment of commercially available clean-energy technologies as quickly as possible in order to reduce carbon pollution and meet each country's climate commitments under the historic Paris Agreement.

## **RENEWABLE ENERGY INNOVATION**

October 21, 2012 Caltech clean-energy research is accelerating thanks to the renovation of the Earle M. Jorgensen Laboratory. Transformed into a cutting-edge facility for energy science, the lab unites two powerhouse programs: the Resnick Sustainability Institute and the Joint Center for Artificial Photosynthesis (JCAP).
