describes the mental capacities of non-human animals and the study of those capacities. The field developed from comparative psychology, including the study of animal conditioning and learning. It has also been strongly influenced by research in ethology, behavioral ecology, and evolutionary psychology, and hence

treatise, *Emotions in Man and Animals*

(Darwin, 1872). In this book Darwin sought to extend his theory of natural selection

beyond the evolution of physical structures and into the domain of mind and behavior by exploring how emotions too might have evolved.

The mirror test was developed by psychologist Gordon Gallup Jr. in 1970 as a method for

determining whether a non-human animal has the ability of self-

recognition. It's also known as the "mark test" or "mirror self-recognition test"

(MSR).
