## *AAMI 17665-1*

The standard also requires detailed documentation of all conditions that affect the process performance now and in the future. ISO 17665-1 only provides very general guidelines on steam sterilization requirements and operations. ISO 17665-2 tries to describe these guidelines more specifically through the use of examples and further explanation.

In ANSI/AAMI/ISO 17665-1:2006/(R)2013,  
an overkill process is described as  
providing a minimum 12 log reduction of  
microorganisms that have a D value of  
1.0 minute at 121 °C. However,  
commercial BIs for steam sterilization  
commonly have D values at 121 °C that  
are greater than or equal to 1.5 minutes.

ansi/aami/iso 17665-1: 2006 (r) 2013.  
Section 12.1.6 states: “If the sterilisation  
process relies on the removal of air from  
the steriliser chamber in order to  
achieve rapid and even penetration of  
steam into the steriliser load, a steam  
penetration test shall be carried out  
each day before the steriliser is used.
