Cells, Tissues and
Organs As we
mentioned before, cells
are the building blocks
of life. When we have a
group of similar cells
working together this is
called a tissue , for
example muscle tissue
is made up of lots of
muscle cells.

Organ Systems
Answer

types of tissue in the human body: epithelial, muscle, nerve and connective. Epithelial tissue covers the exterior of the body as well as the linings of the organs and cavities of the body. Muscle tissue contains cells that are sometimes called “excitable” because they are able to contract and enable movement.

Organs, Organ Systems ...

From simplest to complex, an organism is made up of cells, tissues, organs, and organ systems. Cells make up the most basic level of organization; the cell is the building block of a living organism. This is followed by tissues. Tissues are groups of cells that work together and have a similar structure and

Organ Systems
Answer

Organs. When different types of tissues are organized together to perform a complex function, it's called an organ. The heart is an organ. It has muscle tissue, connective tissue, and nerve tissue all working together to pump blood. Organs can do more than one function and each function can be pretty complicated.
