Control Systems Safety Evaluation and Reliability provides a basic foundation of material, including probability, statistics, reliability theory definitions, and basic reliability modeling techniques, as well as advanced topics relevant to safety instrumented and control systems. Each chapter contains exercises to assist the reader in applying the theories presented with their practical implementation.

CCHS Safety Evaluation of Chevron's Richmond Refinery port in the evaluation of safety in the context of EN ISO 13849-1. The tool, which runs on Windows, enables users to model the structure of the safety-related parts of control systems (SRP/CS) based upon the "designated architectures", and ultimately permits automated calculation of the reliability
