Project 1: Rectangular Waveguide (HFSS)

High-frequency circuit designers must often consider the performance limits, physical dimensions, and even the power levels of a particular design when deciding upon an optimum printed-circuit-board (PCB) material for that design. But the choice of transmission-line technology, such as microstrip or grounded coplanar waveguide (GCPW) circuitry, can also influence the final performance expected ...

II. ANTENNA DESIGN A. Principle of coplanar waveguide feed As shown in Figure 1, the coplanar waveguide composed . Three metal etching conduction bands are in the same side of the dielectric substrate. The signal is in the between of the two ground part on the one side of the dielectric substrate, the other side is nothing.

characteristic impedance and the attenuation of the line. • The gap in the coplanar waveguide is usually very small and supports electric fields, primarily concentrated in the dielectric.

Microstrip vs. Coplanar Waveguides

The Coplanar Waveguide (CPW) is commonly used in microwave circuits. COMSOL Multiphysics, with the RF Module, makes it easy to compute the impedance, fields, losses, and other operating parameters needed when designing a CPW. Grounded Coplanar Waveguide Design in 2D. Two typical Coplanar Waveguides are diagrammed in cross section below.

Coplanar waveguide - Wikipedia

A variant of coplanar waveguide is formed when a ground plane is provided on the opposite side of the dielectric, which is called finite ground-plane coplanar waveguide (FGCPW), or more simply, grounded coplanar waveguide (GCPW). The advantages of coplanar waveguide are that active devices can be mounted on top of the circuit, like on microstrip.

Coplanar waveguide. The ground-plane serves as a third return conductor. Coplanar waveguide was invented in 1969 by Cheng P. Wen, primarily as a means by which non-reciprocal components such as gyrators and isolators could be incorporated in planar transmission line circuits.

All Answers (5) First of all, the size of the port is a very important consideration. On one hand, the port needs to be large enough to enclose the significant part of the coplanar line field. On the other hand, the port size should not be unnecessarily large because this may cause higher order waveguide modes to propagate in the port. Hi, Read.
