### Using the Alphabet to Explain Cystic Fibrosis to Children

Cystic Fibrosis (CF) is an inherited disease that causes thickened mucus to form in the lungs, pancreas and other organs. In the lungs, this mucus blocks the airways, causing lung damage and making it hard to breathe.

### Cystic Fibrosis Symptoms and Diagnosis | Everyday Health

Diagnosing cystic fibrosis is a multistep process, and should include a newborn screening, a sweat test, a genetic or carrier test, and a clinical evaluation at a CF Foundation-accredited care center. Although most people are diagnosed with CF by the age of 2, some are diagnosed as adults.

### COMMUNICATION SKILLS: EXPLAINING CYSTIC FIBROSIS

The commonly accepted explanation for airway disease in cystic fibrosis is the “low volume” hypothesis. A reduced volume of airway surface liquid causes failure of mucociliary clearance, the lungs’ innate defence mechanism. 3 The mucociliary dysfunction means that a patient with cystic fibrosis cannot effectively clear inhaled bacteria. In addition, there is an excessive inflammatory response to pathogens.

### Cystic fibrosis - Genetics Home Reference - NIH

Cystic fibrosis is an autosomal recessive genetic condition, which means that it is inherited through genes but frequently parents of an affected children can ‘carry’ the gene without having the disease itself

### About Cystic Fibrosis | CF Foundation

Cystic fibrosis is an inherited disease characterized by the buildup of thick, sticky mucus that can damage many of the body's organs. The disorder's most common signs and symptoms include progressive damage to the respiratory system and chronic digestive system problems.

### Cystic Fibrosis (CF) | American Lung Association

Cystic fibrosis is an inherited disease caused by mutations in a gene called the cystic fibrosis transmembrane conductance regulator (CFTR) gene. The CFTR gene provides instructions for the CFTR protein.

### What My Children Taught Me About Explaining Their CF | CF ...

Cystic fibrosis (CF) is a chronic, inherited disease that affects how water and salt move in and out of cells, which in turn impact the production of sweat, mucus, and digestive juices. CF patients produce an excessive amount of thick and sticky mucus, which over time builds up and leads to complications.

### Cystic fibrosis - Wikipedia, the free encyclopedia

Cystic fibrosis (CF) is a genetic disorder, which means you get it from your parents at birth. It affects the way your body makes mucus, a substance that helps your organs and systems work.

### Cystic fibrosis - Symptoms and causes - Mayo Clinic

How to explain cystic fibrosis to a child Age-appropriate honesty. Our family’s philosophy when talking to our son about CF will always be rooted in “age-appropriate honesty”. We never want him to feel as if he’s in the dark or missing important information about my health. My disease directly affects him, and therefore we believe he deserves to know as much information as developmentally sound.

### Cystic Fibrosis Explaining

Cystic fibrosis is an inherited disorder that causes severe damage to the lungs, digestive system and other organs in the body. Cystic fibrosis affects the cells that produce mucus, sweat and digestive juices. These secreted fluids are normally thin and slippery.
