EN 1993: Design of steel structures. EN 1993 Eurocode 3 applies to the design of buildings and other civil engineering works in steel. It complies with the principles and requirements for the safety and serviceability of structures, the basis of their design and verification that are given in EN 1990 - Basis of structural design.

EN 1993-1-2: Eurocode 3: Design of steel structures - Part ...

Bending resistance of cross-section (clause 6.2.5) for Class 1 or 2 cross-sections. EN 1993-1-1 recommends a numerical value of $\gamma_{M0} = 1.00$ (though for buildings to be constructed in the UK, reference should be made to the National Annex). The design bending resistance of the cross-section.

$6198 \times 10^4 \times 275 = 4 \text{ Nmm} = 1704 \text{ kNm}$.
