We also wish to integrate the software with the textbook Engineering and Chemical Thermodynamics by Koretsky so that it is a natural extension of the learning curriculum[2]. ThermoSolver is a software program that we have engineered specifically to meet these goals. ThermoSolver is a graphical Windows program available for free from the Web[1]. The

Chemical engineers face the challenge of learning the difficult concept and application of entropy and the 2nd Law of Thermodynamics. By following a visual approach and offering qualitative discussions of the role of molecular interactions, Koretsky helps them understand and visualize thermodynamics.

ThermoSolver Software has been specifically designed to complement this text. This integrated, menu-driven program allows you to perform more complex calculations and explore a wide range of problem solving in thermodynamics. Equations used to perform the calculations can be viewed within the program and use nomenclature consistent with the text.

Thus, while the final design of a chemical or biological process requires the study of the kinetics of chemical reactions and rates of transport, thermodynamics defines the driving force for the process and provides us with a key tool in engineering analysis and design.
