This course is an introduction to the dynamics and vibrations of lumped-parameter models of mechanical systems. Topics covered include kinematics, force-momentum formulation for systems of particles and rigid bodies in planar motion, work-energy concepts, virtual displacements and virtual work. Students will also become familiar with the following topics: Lagrange's equations for systems of ...

This Division researches many aspects of mechanics, materials, bio-mechanics and engineering design. It is led by Professor Robin Langley . The research in Applied Mechanics is directed at many challenging dynamics and vibration problems associated with the design of modern engineering structures at all length scales – from atomic structures and MEMS devices to the largest man-made structures.
