Example of Rankine Cycle - Problem with Solution Let assume the Rankine cycle, which is the one of most common thermodynamic cycles in
thermal power plants. In this case assume a simple cycle without reheat and without with condensing steam turbine running on saturated steam
(dry steam).

Example of Rankine Cycle - Problem with Solution

The book covers every topic taught in thermodynamics at the undergraduate level in an engineering college. All the problems are discussed at
length and line diagrams and figures have been given liberally to help the reader in understanding the logic. This book is suitable for all university
examinations.

Engineering Thermodynamics: Chapter-13 Problems. 13-1-16 [c8h18-dryAir] Octane (C 8 H 18 in gaseous form) is burned with dry air. The
volumetric analysis of the products on a dry basis is 8.86% CO₂, 0.662% CO, 7.51% O₂ and 82.978% N₂. Determine (a) the air-fuel ratio and (b)
the percentage of stoichiometric air used.

Thermodynamic Properties

Solved Problems on Thermodynamics:-Problem 1:-A container holds a mixture of three nonreacting gases: n₁ moles of the first gas with molar
specific heat at constant volume C_{v1}, and so on. Find the molar specific heat at constant volume of the mixture, in terms of the molar specific heats
and quantities of the three separate gases.

Engineering Thermodynamics: Chapter-2 Problems. 2-1-4 [cone-invert] A conical tank of base diameter D and height H is suspended in an inverted
position to hold water. A leak at the apex of the cone causes water to leave with a mass flow rate of $c\sqrt{h}$, where c is a constant and h is the
height of the water level from the leak at the bottom.
