I have a Hydro flame furnace in my trailer. It is model #8232. When I activate the thermostat, the blower starts but the burner never lights. I wiggled the wires to the electrode and the furnace ignited and worked the rest of the trip. On the second trip I tried that again, but this time it did not light.

~~Troubleshooting the RV Furnace~~

The Hydro Flame LPG furnace has been used in travel trailers for decades. It was also carried by the American Medical Research Expedition to Mt. Everest and used in the record setting Pacific Crossing of the Double Eagle Balloon. Since Atwood acquired Hydro Flame, they are now calling it the Everest Star II, but it is very similar to the original.

~~blower motor for model 8232 serial #1202168~~

Troubleshooting the RV Furnace. Time delay relay (Used on older furnaces, newer furnaces have the relay incorporated into the circuit board) This relay performs two separate jobs - one to handle the relatively high current needed to run the blower motor - and two, to allow the blower to run for 45 to 90 seconds after the thermostat is satisfied.
