3.2 Interface 2 Requirements. When more than one interface between two systems is being defined in a single ICD, each should be defined separately, including all of the characteristics described in Section 3.1 for each. There is no limit on the number of unique interfaces that can be defined in a single Interface Control Document.

projects. One concern is the management of Interface Control Documents (ICDs) [4] that is at the center of most industries' system engineering processes, and that is not supported in a straightforward way by SysML. This paper highlights the challenge in supporting ICDs by SysML tools, and demonstrates how these
