LINES AND WAVEGUIDES UNIT I -
TRANSMISSION LINE THEORY 1. Define -
Characteristic Impedance [M/J-2006,
N/D-2006] Characteristic impedance is
defined as the impedance of a
transmission line measured at the
sending end.

If the velocity coefficient is 0.82, the

Acces PDF John D Ryder Transmission Lines And Waveguides

wavelength is $0.82 \times c / 200\text{MHz} = 1.23$ m. Now we can find the actual length of the line: $d = (135/720)(1.23) = 23$ cm. This end of the line is on the $r = 1$ circle, so the resistive component of the impedance is 300Ω . On an actual Smith Chart, we could also read off the reactance as well.
