strikingly different from a hybrid that is descended from a grey wolf. A black wolf hybrid will have its own unique appearance. Of course, some breeds of dog are more likely to interbreed and create this hybrid than other breeds.

Coywolf

Hybridization between wolves and dogs typically occurs when the wolf population is under strong hunting pressure and its structure is disrupted due to a high number of free-ranging dogs. Wolves typically display aggressiveness toward dogs, but a wolf can change its behaviour and become playful or submissive when it becomes socially isolated.

Coywolf (sometimes called woyote) is an informal term for a canid hybrid descended from coyotes, eastern wolves and gray wolves. All members of the genus *Canis* are genetically closely related with 78 chromosomes, therefore they can interbreed. One genetic study indicates that these two species genetically diverged relatively recently (around 55,000–117,000 years ago).
