Dysphagia - Symptoms and causes - Mayo Clinic
The esophagus, (American English) or oesophagus (British English; see spelling differences) (/ˈiːsoʊfəɡəs/), informally known as the food pipe or gullet, is an organ in vertebrates through which food passes, aided by peristaltic contractions, from the pharynx to the stomach.

Pathology of the Esophagus - SlideShare
Lewy pathology of the esophagus was significantly associated with autonomic failures such as constipation (p < 0.0001) and among PNS regions, correlated the most with LBD progression (r = 0.95, p < 0.05). These findings suggest that the propagation of esophageal Lewy pathology is a predictive factor of LBD.

Lewy pathology of the esophagus correlates with the ...
Adenocarcinoma is the most common form of esophageal cancer in the United States, and it affects primarily white men. Squamous cell carcinoma. The squamous cells are flat, thin cells that line the surface of the esophagus. Squamous cell carcinoma occurs most often in the upper and middle portions of the esophagus.

Other malignant tumors such as lymphoma, ... Esophageal squamous cell carcinoma. Premalignant/precursor lesion. Invasive esophageal ...

Barrett's esophagus - Libre Pathology
Almost all cases of esophageal adenocarcinoma are derived from Barrett's esophagus, which is a complication of esophageal adenocarcinoma precancerous lesions. Chronic exposure of the esophagus to gastroduodenal intestinal fluid is an important determinant factor in the development of Barrett's esophagus.

Esophagus Pathology - American Cancer Society
Esophageal Pathology. Although pathologies affecting the esophagus are diverse they tend to produce a limited set of clinical consequences. Obstruction, narrowing, or functional immobilization of the esophagus tends to produce dysphagia. Food regurgitation into the esophagus, especially because of concomitant regurgitation of stomach acid, results in the sensation of heartburn.

Esophagus - Wikipedia
Barrett esophagus (BE) is a metaplastic replacement of the stratified squamous epithelium of the distal esophagus with columnar epithelium containing goblet cells. US definition requires intestinal metaplasia. In Japan and the UK, goblet cells are not required for the diagnosis.

Esophageal stricture - Libre Pathology
The most common problem with the esophagus is GERD (gastroesophageal reflux disease). With GERD, a muscle at the end of your esophagus does not close properly. This allows stomach contents to leak back, or reflux, into the esophagus and irritate it. Over time, GERD can cause damage to the esophagus.
