Although, as W.D. Billings notes in his chapter in this book. the development of physiological ecology can be traced back to the very beginnings of the study of ecology it is clear that the modern development of this field in North America is due in the large part to the efforts of Billings alone.

Physiological ecology is an exciting, rapidly developing field. This volume ably indicates the immense gaps in our knowledge in part through a compilation of current knowledge about how plants adapt to the environmental conditions of the various North American biomes.

Taken together, the physiological and other functional trait advantages of the introduced lineage (greater density, ramet height and biomass, higher RGR and SLA, and high N uptake under high anthropogenic N loading) are major factors driving its invasiveness in North America.

Over the past few decades, physiological ecology has emerged as a distinct and critical field combining the disciplines of ecology and physiology. Dozens of recent books have been published in the field, such as the Physiological Ecology of North American Plant Communities by Chabot and Mooney and the Physiological Ecology of Wood Plants by Kozłowski, Kramer, and Pallardy.

In the following chapters the authors present case studies of key species representing dominant growth forms of the North American deserts, and provide an up-to-date and comprehensive review of the major patterns of adaptations in desert plants. One chapter is devoted to several important exotic plants that have invaded North American deserts.

Physiological ecology and plant functional traits are often used to explain plant invasion. To gain a better understanding of how traits influence invasion, studies usually compare the invasive plant to a native congener, but there are few conspecific examples in the literature.

Dwight built the foundation for physiological ecology in North America and provided leadership for the field throughout his illustrious career. Together, Dwight and Shirley have shown a deep regard for the interests and training of graduate students in this dynamic component of ecology. New Phytologist Poster Award
