Ultimately, a total of 14 skulls (5 asymmetric and 9 symmetric) were included for this study. Prior to the radiographic examination, metal markers with a diameter of 1.5 mm were glued onto the selected landmarks (Table 1) with cyanoacrylate glue (Uni-rapide Gold; Pattex, Henkel, Nieuwegein, Netherlands).

Radiographic cephalometry, has been routinely used in orthodontics for over half a century, but is now also being used as a diagnostic, treatment, and research tool by maxillofacial and plastic surgeons, prosthodontists, pediatric dentists, and general dental practitioners. From inside the book.

*Radiographic cephalometry : from basics to 3-D imaging ...*

Cephalometric radiography is a standardized and reproducible form of skull radiography utilized by orthodontists to assess the relationship of the teeth to the jaws and the jaws to the facial skeleton. Standardization is necessary for cephalometry which is the measurement and comparison of points, distances, and lines within the facial skeleton.
