Chapter 1 Introducing renewable energy
By Godfrey Boyle, Bob Everett and Gary Alexander. 1.1 Introduction Renewable energy sources, derived principally from the enormous power of the Sun's radiation, are at once the most ancient and the most modern forms of energy used by humanity. Solar power, both in the form of direct solar radiation and in indirect forms such as bioenergy, water or wind power, was the energy source upon which early human societies were based.

clean, sustainable power in substantial quantities from renewable energy sources is now arousing interest world-wide, stimulated by recent technological developments that have improved the cost-effectiveness of many of the 'renewables' and by increasing concern over...

~~Renewable Energy by Godfrey Boyle~~
~~Goodreads~~

Renewable Energy examines both the practical and economic potential of the renewable energy sources to meet this challenge. The underlying physical and technological principles behind deriving power from direct solar (solar thermal and photovoltaics), indirect solar (biomass, hydro, wind and wave) and non-solar (tidal and geothermal) energy sources are explained, within the context of their environmental impacts, their economics and their future prospects.

The prospect of producing clean, sustainable power in substantial quantities from renewable energy sources is arousing interest world-wide. This book provides a comprehensive overview of the principal renewable energy sources: solar thermal, biomass, tidal, wave, photovoltaic, hydro, wind, and geothermal. With the aid of detailed illustrations and tables of data, it explains the physical and ...
