ago, with an uncertainty of around 21 million years at the 68% confidence level.

## Physics

### **38 Facts About Universe That Will Boggle Your Mind**

The lepton epoch was the period in the evolution of the early Universe in which the leptons dominated the mass of the Universe. It started roughly 1 second after the Big Bang, after the

# Online Library The Early Universe Facts And Fiction

majority of hadrons and anti-hadrons annihilated each other at the end of the hadron epoch. During the lepton epoch the temperature of the Universe was still high enough to create lepton/anti-lepton pairs, so leptons and anti-leptons were in thermal equilibrium.

## **7 Surprising Things About the Universe | Space**

# Online Library The Early Universe

The universe is around 13.7 billion years old. It is thought the universe was born when a super dense object smaller than a sub atomic particle began to rapidly expand. The first galaxies in the universe began to form around 13.2 billion years ago. There are now over 100 billion galaxies in the observable universe.
