Ultrasound (TRUS)? -
ProstateCancer911
Transrectal ultrasound
TRUS evaluates the
size and texture of the
prostate by means of a
lubricated probe
inserted into the
rectum. The radiologist
looks for enlargement,
signs of inflammation
and increase in blood
flow, which can all
signify benign disease.

A transrectal
ultrasound (TRUS) is
used as a diagnostic or
screening tool as a way
to take images and
assess organs and
tissues inside the body.
The procedure may
also be referred to as a
prostate sonogram
(when used on men) or
an endorectal
ultrasound.

Ultrasound Of The Prostate

Through the prostate ultrasound, the doctor collects a sample of cells or tissues from the abnormality, to be examined under a microscope. This way, cancerous cells can be detected in the prostate. How is a TRUS performed? A prostate ultrasound is typically performed as an outpatient procedure and usually takes about 15-30 minutes to complete.
