[UNIX System Management Primer Plus | InformIT](#)

Big Brother (alias BB) was a tool for systems and network monitoring, generally used by system administrators. The advent of the dynamic web page allowed Big Brother to be one of the first monitoring systems to use the web as its user interface. Prior to this, monitoring tools were generally console based, or required graphic terminals such as X Window to operate.

[Chapter 9 - Unix® System Management Primer Plus \[Book\]](#)

The Berkeley r-commands are a suite of computer programs designed to enable users of one Unix system to log in or issue commands to another Unix computer via TCP/IP computer network. The r-commands were developed in 1982 by the Computer Systems Research Group at the University of California, Berkeley, based on an early implementation of TCP/IP (the protocol stack of the Internet).
